

Driver User Guide

Pantrucks Fleet Management System

This guide walks you through everything you do as a driver in the Pantrucks app — from logging in and starting a shift to capturing pickup photos, marking trip progress, submitting proof of delivery, and reporting issues on the road.

Daily Workflow

Accept jobs, log trip status, capture POD

Photo Capture

Pickup, jack-up, gateless completion

Offline Support

Work without signal — auto-syncs later

Table of Contents

A walkthrough of every screen you will use on the road.

- 1. Logging in to the Driver App 3
- 2. Dashboard at a Glance 4
- 3. Starting Your Shift (Pre-Departure) 5
- 4. Accepting or Declining a Dispatch 6
- 5. Marking Pickup (Container Number + Photo) 7
- 6. Trip Status — On the Way, Arrived, Delivered 8
- 7. Proof of Delivery (POD) 9
- 8. Trailer Jack-up at Site 10
- 9. Gateless Completion 11
- 10. Reporting a Breakdown or Sending SOS 12
- 11. Offline Mode and Auto-Sync 13
- 12. Editing Your Profile 14
- 13. Tips & Troubleshooting 15

1. Logging In

Open your phone browser and go to the Pantrucks app URL provided by your dispatcher (for example, <https://app.pantrucks.com> or your company's specific address). Bookmark it to your home screen for quick access.

- 1

Open the app URL

Enter the link in your phone's browser (Chrome on Android, Safari on iOS). The first time, tap your browser menu and choose Add to Home Screen so the app opens like a native app.
- 2

Enter your driver credentials

Use the username and password your dispatcher assigned to you. Keep them private.
- 3

Tap Sign In

Once you sign in, you stay logged in until you explicitly sign out or your session expires. Most drivers stay signed in for a whole shift.

ALLOW GPS AND CAMERA

On first launch the browser asks for permission to use your phone's GPS and camera. Tap ALLOW for both — pickup photos, jack-up photos, and trip status updates all rely on these.

2. Dashboard at a Glance

After signing in you land on the dashboard. Everything you need during a shift is reachable from this one screen. Key things to look for:

- 1 Shift banner (top)**
Green = shift active. Yellow = no active shift; tap Start Shift to run the pre-departure checklist.
- 2 Active / Completed cards**
Live counts of dispatches in progress and finished today. They update automatically.
- 3 Earnings tile**
Tap to see a breakdown by payroll cutoff.
- 4 My Bookings list**
Every dispatch assigned to you. Tap a card to expand and see the trip status pills, documents, and action buttons.
- 5 Bottom nav**
Home / Unit / Chat / Trip Report / SOS — always one tap away.

3. Starting Your Shift (Pre-Departure)

Before you can be assigned a job, you must complete the pre-departure checklist. This confirms the truck is roadworthy and starts machine-hours billing.

- 1

Pick your truck
Tap the truck box and choose the unit you're driving today. Only trucks that are good condition and not under maintenance appear in the list.
- 2

Tap each checklist item
Each item turns green when confirmed. You cannot submit until all five are confirmed.
- 3

Add remarks (optional)
If something is borderline (e.g. a tyre that should be looked at next week), note it here for the workshop.
- 4

Submit and Go Available
Your status flips to Available. Dispatchers can now assign you a trip.

Submit and Go Available

TRUCK NOT IN LIST?

It may be under maintenance or not registered in the unit table. Talk to dispatch — they need to clear the maintenance flag before you can use it.

4. Accepting or Declining a Dispatch

When a dispatcher assigns you a job, the booking card on your dashboard shows two buttons: Accept and Decline. You'll also get a push notification if notifications are enabled.

- 1

Read the dispatch details
Tap the booking card to expand it. Check the customer, the from/to locations, and the truck/trailer assigned.
- 2

Tap Accept
The card flips to Accepted. The four-step trip status pills (Picked up ? On the way ? Arrived ? Delivered) appear, and the dispatch is locked to you.
- 3

Or tap Decline
A small dialog asks for a reason (optional but encouraged). Dispatch is notified and the job is reassigned to another driver.

YOU CAN ACCEPT MULTIPLE DISPATCHES

If dispatch has queued several jobs for you, you can accept and work them in order. The Active count on your dashboard reflects how many are in progress.

5. Marking Pickup

When you have the container loaded and are about to leave the origin, tap Picked up. A confirmation modal pops up asking for the container number and a photo.

- 1

Tap the Picked up pill

It's the first of four status buttons on the expanded booking card.
- 2

Enter the container number

Format: 4 capital letters followed by 7 digits, e.g. ABCD1234567. The field auto-capitalises and strips invalid characters.
- 3

Tap Take Photo

Your phone camera opens. Frame the container so the number is clearly readable, then tap the shutter.
- 4

Tap Save Pickup

The photo is compressed automatically (no need to worry about file size) and uploaded. A spinner shows progress.

WEAK SIGNAL? NO PROBLEM

If the upload can't reach the server, the app saves it locally and shows 'Saved offline — will sync when back online.' You can continue working. The chip at the bottom of the screen shows how many uploads are waiting.

6. Trip Status Updates

Once you've marked Pickup, three more pills become available in sequence: On the way, Arrived, and Mark Delivered. Tap each one as that step actually happens.

- 1 Green = done**
A completed step shows in green with a checkmark and cannot be re-tapped.
- 2 Blue = next**
The active blue pill is the one you should tap next.
- 3 Grey = future**
Greyed-out pills are not yet reachable — finish the previous step first.
- 4 Mark Delivered**
After tapping Delivered, you're taken to the POD page. See section 7.

YOUR GPS IS CAPTURED AUTOMATICALLY

Each tap silently sends your lat/lng to dispatch. There's nothing extra for you to do — it's part of the tap.

7. Proof of Delivery (POD)

After Mark Delivered you're sent to the POD page. Dispatch will not close the job (and you don't get paid for it) until POD is captured and verified.

- 1

Take at least 2 photos
Slots 1 and 2 are required. Slot 3 is optional (use it if you need a wider shot or to capture the receiver's ID).
- 2

Type the recipient name
Print the name of the person accepting the cargo.
- 3

Get their signature
Pass the phone to the recipient and have them sign in the box with their finger. Tap Clear if it's illegible.
- 4

Submit POD
Your dispatcher gets a notification and can verify the POD on their end. The job moves to Pending Verification.

POD

Photos (at least 2)

Recipient signature

Submit POD

DON'T SKIP THE SIGNATURE

POD without a signature can be rejected by the dispatcher, which delays your payment. Always get a sign-off.

8. Trailer Jack-up at Site

If you're leaving the trailer at the destination site (so the truck can be released for another job), use the Jack-up flow. Trailer billing keeps running until the trailer is returned to compound.

- 1 Open Jack-up from the dispatch card**
Tap Jack-up in the document/alt-flow section of the booking card.
- 2 Confirm the trailer code**
The field is pre-filled from your dispatch. Verify it matches the trailer you're actually leaving.
- 3 Wait for GPS to lock**
The box turns green when GPS is locked. If GPS times out, tap it to retry.
- 4 Take a photo of the detached trailer**
Frame the trailer clearly. The photo is automatically compressed before upload.
- 5 Tap Mark Jacked Up**
Your truck is released for the next job. The trailer continues to bill until it's returned to compound.

The screenshot shows a mobile app interface for the 'Jack-up' process. At the top, the status bar shows the time 9:41 and 4G 100% signal. The app title 'Jack-up' is displayed in a blue header. Below the header, there is a 'Trailer code' field with the value 'TR007'. A green box indicates 'GPS Locked: 14.123, 121.456'. Underneath, there is a 'Photo of detached trailer' section with a 'Take Photo' button and a placeholder image. At the bottom, there is a blue button labeled 'Mark Jacked Up'.

9. Gateless Completion

Some destinations have no gate or guard to sign for the cargo. Use Gateless Completion to confirm delivery with GPS evidence + two photos.

- 1

Open Gateless from the dispatch card
It's listed under documents / alt-flows.
- 2

Confirm GPS is locked
Stand outside if the lock is taking too long; concrete and metal roofs interfere with GPS.
- 3

Take Photo 1
Wide shot showing the cargo at the delivery location.
- 4

Take Photo 2
Close-up of the container number or a recognisable landmark for the address.
- 5

Tap Submit Gateless
This is an end-state — the dispatch flips to delivered. No POD signature required.

WORKS OFFLINE TOO
If you have no signal at the site, the submission queues locally. As soon as you regain signal it syncs automatically.

10. Reporting a Breakdown or Sending SOS

If something goes wrong on the road — mechanical failure, cargo issue, or an emergency — you have two tools.

Breakdown Form

From the bottom nav, tap SOS. The Breakdown form lets you classify the incident, set severity, request assistance (tow / mechanic / cargo transfer / emergency), and add a photo.

SOS Push

On the dashboard's bottom nav, the red SOS button sends an immediate distress signal to dispatch with your current location. Use it for genuine emergencies only.

Description

Submit

SOS = EMERGENCY ONLY

The SOS button alerts every dispatcher on duty. Use it for accidents, medical emergencies, or threats — not for routine breakdowns.

11. Offline Mode and Auto-Sync

The Pantrucks driver app is designed to keep working even when the signal drops. Every submit you make — pickup, POD, jack-up, gateless, breakdown, status updates — is queued locally if the network can't reach the server, and it syncs automatically when you're back online.

The Status Pill

Look at the bottom of any driver screen. A small floating pill shows your connection state:

? Online

? Offline -- 2 waiting to sync

? 2 waiting -- tap to sync

1

Green Online (auto-fades)

Everything is working normally. The pill disappears after a second.

2

Amber Offline

No signal. The number shows pending submissions waiting to upload.

3

Blue tap-to-sync

You're online and there's a queue. Tap the pill to force a sync attempt.

YOU WILL NOT LOSE DATA

Even if you close the app or your phone restarts, queued submissions stay on disk and resume syncing when the app reopens with signal. Idempotency keys prevent duplicate records on retry.

What to do when you see a queue

Keep working. The queue drains automatically as soon as you get bars. If you need to force it (e.g. you're back in the depot and want to make sure everything's uploaded before clocking out), tap the blue pill.

12. Editing Your Profile

Update your profile photo, name, or password from the profile page.

- 1

Open Profile
Tap your name in the sidebar (desktop) or the avatar at the top of the dashboard.
- 2

Change your photo
Tap the small camera icon on the avatar. Pick a photo from your gallery or take a new one.
- 3

Update name or username
Edit the fields directly. Username changes take effect on next sign-in.
- 4

Change password
Type a new password and confirm. Leave blank to keep your current one. Tap Save Changes.

FORGOT YOUR PASSWORD?
Drivers cannot reset their own passwords. Ask your HR Admin or dispatcher to reset it for you.

13. Tips & Troubleshooting

Add to Home Screen

Tap your browser's share/menu button and choose Add to Home Screen. The app then opens like a regular phone app — full screen, no browser bar.

Photos look slow to upload

The app automatically compresses photos before upload (a 10 MB iPhone photo becomes ~400 KB). If uploads still feel slow, you're probably in a dead zone — the offline queue will handle it.

A button does nothing when I tap it

Wait 2–3 seconds. The app may be acquiring GPS in the background. If still nothing after 5 seconds, pull-to-refresh the page once. If the problem persists, screenshot the screen and send it to your supervisor.

I see DriverUpload is not a function

Your browser is serving a stale cached file. Pull-to-refresh once, or close and reopen the app. Cache version markers in the URLs force a fresh load.

I tapped Decline by accident

Tell your dispatcher right away — they can reassign the job back to you. The decline is logged but reversible at the dispatch level.

My pickup photo did not save

Check the pill at the bottom. If it shows 'N waiting to sync', the photo is queued — it'll upload when signal returns. If it shows Online and the photo is genuinely gone, take it again.

My battery drains fast

GPS and continuous network use are battery-hungry. Carry a power bank in the cab. Close other apps you're not using.

KEEP YOUR DISPATCHER UPDATED

When something doesn't work as expected, the fastest path to a fix is a screenshot + a quick chat message via the Chat icon in the bottom nav. Don't suffer in silence.
